

學習要點:

1. PHP 連接到 MySQL
2. 增刪改查
3. 其他常用函數

二、增刪改查

新增數據

```
<?php
    $query = "INSERT INTO grade (name,email,point,regdate) VALUES ('湖心彭', 'bigbird@sina.com.cn',67,NOW())";
    @mysql_query($query) or die('新增錯誤，錯誤信息: '.mysql_error());
?>
```

修改數據

```
<?php
    $query = "UPDATE grade SET point=87 WHERE id=7";
    @mysql_query($query) or die('修改錯誤，錯誤信息: '.mysql_error());
?>
```

刪除數據

```
<?php
    $query = "DELETE FROM grade WHERE id=6";
    @mysql_query($query) or die('刪除錯誤: '.mysql_error());
?>
```

顯示數據

```
<?php
    $query = "SELECT id,name,email,point FROM grade";
    $result = @mysql_query($query) or die('查詢語句出錯: '.mysql_error());
    While(!$row = mysql_fetch_array($result)){
        Echo $row['id'].'----'.$row['name'].'----'.$row['email'].'---
-'. $row['point'];
        Echo '<br />';
    }
?>
```
