

學習要點:

1. 創建圖像
2. 簡單小案例

二、簡單小案例

簡單驗證碼

```
<?php
    Header("Content-type:image/png");
    For($Tmpa=0,$Tmpa<4,$Tmpa++){
        $nmsg = dechex(rand(0,15));
    }
    $im = imagecreatetruecolor(75,25);
    $blue = imagecolorallocate($im,0,102,255);
    $white = imagecolorallocate($im,255,255,255);
    Imagefill($im,0,0,$blue);
    Imagestring($im,5,20,4,$nmsg,$white);
    Imagepng($im);
    Imagedestroy($im);
?>
```

加載已有的圖像

```
<?php
    Header('Content-Type:image/png');
    Define('__DIR__',dirname(__FILE__),'\\');
    $im = imagecreatefrompng(__DIR_.'222.png');
    $white = imagecolorallocate($im,255,255,255);
    Imagestring($im,3,5,5,'http://www.yc60.com',$white);
    Imagepng($im);
    Imagedestroy($im);
?>
```
